🔧 Objective

Install **Ubuntu Server 24.04 LTS** and practice essential Linux commands.

🖥️ Steps

1. Download Ubuntu Server ISO
   👉 https://ubuntu.com/download/server
2. Create a Virtual Machine using:
   - VirtualBox
   - Provision:
     - CPU: 2 Cores
     - RAM: 2 GB
     - Storage: ≥ 20 GB
3. Install Ubuntu Server on the VM
4. Log in and practice basic Linux commands

📁 File & Directory Commands

```
pwd            → Show current directory
ls             → List files
ls -l          → Detailed list
cd <dir>       → Change directory
cd ..          → Go up one level
mkdir <name>   → Create directory
rmdir <name>   → Remove empty directory
rm <file>      → Delete file
rm -r <dir>    → Delete directory
```

📄 File Operations

```
touch file.txt         → Create file
cp file1 file2         → Copy file
mv file1 file2         → Move/rename file
```

```
cat file.txt          → View file content
nano file.txt         → Edit file
```

🔍 Search & Help

```
man <command>   → Manual/help
<command> --help → Quick help
find . -name file.txt → Find file
```

⚙️ System Info

```
whoami     → Current user
hostname   → System name
uname -a   → OS details
top        → Running processes
df -h      → Disk usage
free -h    → Memory usage
```

👤 User & Permissions

```
sudo <cmd>        → Run as admin
adduser name      → Add user
passwd            → Change password
chmod 755 file    → Change permissions
chown user file   → Change ownership
```

🌐 Networking

```
ip a        → Show IP address
ping google.com → Test connectivity
```

📦 Package Management (Ubuntu)

```
sudo apt update       → Update package list
sudo apt upgrade      → Upgrade system
sudo apt install <pkg> → Install package
sudo apt remove <pkg> → Remove package
```
